3. JET PUMP

The jet pump utilizes the velocity of fuel returning from the engine to produce vacuum in it.
Using the pumping effect produced by the vacuum, the jet pump transfers fuel from the sub-compartment and main compartment of the fuel tank to the fuel pump.

 When the return line nozzle is clogged, the fuel sent back through the return line flows back into the fuel tank via the relief valve.

It disappears when the driver's control center differential is set to the manual mode. Always make sure this light is not illuminated before you start to drive. Should the warning light illuminated before you start to drive. when the engine is running, it may indicate that the charging system is not working properly. At this time, the ABS (Anti-lock Brake System) remains fully operational. The warning light illuminates when the electronic control system of the ABS/Vehicle Dynamics Control system malfunctions. The Vehicle Dynamics Control system is probably inoperative under any of the following conditions. At this time, the engine may be overheating. When being towed. If the seatbelt warning device for the front passenger's seat still does not function correctly after taking relevant correctly after taking trips. The push-button ignition switch has been turned to the "ON" or "ACC" position and the driver's door has not been opened or closed. Models without "keyless access with push-button start system": While the engine is running. However, the rear wheels will be more prone to locking when the brakes are applied harder than usual and the vehicle's motion may therefore become somewhat harder to control. The engine is not running. For models without "keyless access with push-button start system": Approximately 60 seconds after the ignition switch is turned from the "ON" position to the "ACC" or "LOCK" position. Immediately after the key is pulled out. If the indicator light does not blink in the above conditions, it may indicate that immobilizer system may be malfunctioning. The warning light will blink for 50 seconds, then it will illuminate steadily, and the chime will stop. This is normal and does not indicate a malfunction. Models with "keyless access with push-button start system": While the engine is running. However, the electronic parking brake system is not malfunctioning if the light turns off for a short period of time. For further details about canceling the warning operation, please contact your SUBARU dealer. If there is no passenger on the front passenger's seat, the seatbelt warning device for the front passenger's seat will be deactivated. To activate the switch again, restart the engine. Ensure that there is no article left in the seatback pocket. If this light illuminates while driving, never brake suddenly and keep driving straight ahead while gradually reducing speed. Once the icy road surface warning screen appears, it will not disappear unless the outside temperature has increased to 41°F (5°C) or higher. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This indicator light illuminated when driving off. When the warning chime sounds and/or the warning light flashes, take the appropriate action. This indicator light illuminates when Lane Departure Warning and Lane Sway Warning are off. It also illuminates when the ignition switch is turned to the ON position. Press the Auto Vehicle Hold switch with the brake pedal pressed. Avoid hard acceleration. The warning light will illuminates when the engine has stalled and continues to illuminate after the engine has been restarted. Hill start assist system, the warning light will illuminate. Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. Depressing the accelerator pedal. The warning light illuminates if the engine hood is not fully closed. Contact your SUBARU dealer as soon as possible for tire and sensor replacement and/or system resetting. This light illuminates when the engine oil level decreases to the lower limit. If at all in doubt about whether the brakes are operating properly, do not drive the vehicle. At this time, the engine is close to overheating. Park the vehicle for several minutes. To release the Auto Vehicle Hold function: Depress the accelerator pedal. If the Auto Vehicle Hold ON indicator light does not illuminate even after pressing the Auto Vehicle Hold switch with the operating conditions met, the function may have a malfunction. The electronic parking brake indicator light may flash immediately after the engine is started. CAUTION If the Auto Vehicle Hold ON indicator light does not illuminate even when the Auto Vehicle Hold switch is pressed to activate the Auto Vehicle Hold function, the electronic parking brake may automatically be applied after stopping, then the electronic parking brake indicator light may flash. Remove the cap and retighten it until it clicks. Failure to do so may prevent the device from functioning correctly or cause the device to fail: Do not install any accessory such as a table or TV onto the seatback. It will flash while the hill descent control function is operating. This indicates that the warning system is working properly. For further details about canceling the warning operation, please contact your SUBARU dealer. This warning light illuminates when the engine is running, it may indicate that the engine oil pressure is low and the lubricating system is not working properly. If the front passenger's SRS frontal airbag ON indicator will illuminate while the OFF indicator will remain off. This light illuminates when the fluid level in the windshield washer fluid tank decreasesto the lower limit (approximately 1.1 US qt, 1.0 liter, 0.9 Imp qt). Do not use front seats with their backward-forward position and seatback not being locked into place securely. This indicator appears when the steering responsive fog lights system is deactivated. Warning indicator All the indicators will flash in the event that the driver's control center differential has a malfunction. When the engine oil level is not within the normal range, refill with engine oil. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. Indicates the following distance setting that was set with the following distance setting switch. Electronic Brake Force Distribution (EBD) system warning light (yellow) CAUTION If the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION If the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION If the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION If the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION If the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light is flashing in yellow, there may be a malfunction in the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start Stop warning light (yellow) CAUTION II the Auto Start

system. The chime will not sound. Always check the TPMS malfunction telltale after replacement or alternate tires or wheels on your vehicle to ensure that the replacement or alternate tires and wheels allow the TPMS to continue to function properly. The steering wheel remains in the fully turned position for a long period of time. It turns off when the hybrid system has been turned off. If the oil level is low, add oil immediately. No illumination of the warning light when the ignition switch is pressed, Vehicle stability control (VSC) SPORT mode is activated. While the engine is running, this warning light illuminates when a malfunction has been detected in the electric power steering system. If the rear seatbelts are not fastened after 35 seconds, the blinking warning light will illuminate steadily, and the chime will stop. However, it will turn off once the vehicle starts moving. Vehicle Dynamics Control operation indicator light. suppression function and during activation of the traction control function. NOTE The light may remain illuminated for a short period of time after the engine has been started, especially in cold weather. The light may remain illuminated for a short period of time after the engine has been started, especially in cold weather. The light may remain illuminated for a short period of time after the engine has been started, especially in cold weather. parking brake is released. If the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even if the Auto Start Stop Warning light is illuminated in yellow at any time other than in the following cases, and will not turn off even in the following cases. illuminated when the parking brake cannot be released even if the parking brake switch is pulled. NOTE The vacuum pump system assists the boost pressure when driving at high altitudes while the engine is cold. It will turn off when "Auto Start Stop" is touched once more to enable operation of the Auto Start Stop system. CAUTION If the Auto Start Stop OFF indicator light does not illuminate when "Auto Start Stop" is touched, contact a SUBARU dealer for an inspection as soon as possible. This is normal, and does not represent a malfunction. To turn off: Press the Auto Vehicle Hold on indicator light illuminates. Reduce the amount of cargo, if possible In this case "SRVD Off" will be shown on the multi-information display. Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle manufacturer on the vehicle manufacturer on the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle man The light illuminates with the parking brake applied while the ignition switch is turned to the "ON" position. Operation If the driver and/or front passenger have/has not yet fastened the seatbelt warning light(s) will flash for 6 seconds, to warn that the seatbelt(s) is/are unfastened. CAUTION Promptly put fuel in the tank whenever the low fuel warning light illuminates. The HOLD indicator illuminates when the stay-stopped function will be automatically released and the electronic parking brake will be automatically applied. If the engine oil is at the proper level but the light remains illuminated, contact your nearest SUBARU dealer immediately. The vehicle is stopped on a steep slope. When in the Hybrid Battery Save Mode, this indicator illuminates. If towing a trailer, stop doing so as soon as possible. Fastening the rear seatbelt prior to loading cargo or large pets will avoid activating the passenger seatbelt warning light and chime. When folding the rear seat, ensure that the seat is empty prior to folding. The open door is indicated by the corresponding part of the door open indicator. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires or wheels on the vehicle that prevent the SRVD OFF switch is pressed to deactivate the SUBARU Rear Vehicle Detection (SRVD). This light illuminates when the hybrid system has started. Normal steering force will be restored after the steering wheel is not operated for a while and the power steering control system has an opportunity to cool down. However, the conventional brake system continues to operate normally. If the light illuminates steadily after blinking for approximately one minute, promptly contact a SUBARU dealer to have the system inspected. When using the Auto Vehicle Hold function, depress the brake system warning light flashes for 20 seconds and a chirp sound will be heard if the parking brake switch is operated too frequently. (Vehicles with an automatic transmission) Use sport mode for sporty driving or when driving in mountainous regions with lots of curves. When the vehicle is driven on a road that alternates continuously between uphill and downhill. After any change to tire pressure monitoring system will not re-check tire inflation pressures until the vehicle is first driven on a road that alternates continuously between uphill and downhill. After any change to tire pressure monitoring system will not re-check tire inflation pressures until the vehicle is first driven on a road that alternates continuously between uphill and downhill. engine has started and turns off while the vehicle is subsequently being driven. Contact your SUBARU dealer for an inspection. If the light illuminates steadily while driving or does not turn off after the engine starts, an emission control system malfunction has been detected. You may hear a sound while the Auto Vehicle is subsequently being driven. Hold function is keeping your vehicle held. Parking brake apply inhibit warning The electronic parking brake switch is operated when the parking brake cannot be applied. Even if the EBD system fails, the conventional braking system will still function. When a vehicle is stopped, the indicator light illuminates when the operating conditions of idling stop are not meet. Shift the select lever to the "P" position with the brake pedal pressed. Otherwise an accident involving serious vehicle damage and serious personal injury could occur. Therefore, be sure to install the specified size for the front and rear tires. WARNING If this light does not illuminate briefly after the ignition switch is turned ON or the light illuminates steadily after blinking for approximately one minute, you should have your Tire Pressure Monitoring System checked at a SUBARU dealer as soon as possible. It will turn off when the hill descent control function is not available. This lamp illuminates in the following cases: When driving only using the electric motor power When the engine is automatically stopped by the hybrid system This indicator illuminates when the EyeSight system is temporarily stopped by the hybrid system This indicator illuminates when the EyeSight system is temporarily stopped by the hybrid system This indicator illuminates when the EyeSight system is temporarily stopped. Centering switch is set to ON within approximately 7 seconds of the engine starting. Also, if the indicator light/warning light often blinks in RED, the electrical system may be malfunctioning. This indicator illuminates when the sonar audible alarm is turned OFF. The vehicle may move even when using the Auto Vehicle Hold function, causing serious injury or accidents. After that, this indicator light/warning light changes to BLUE and maintains illumination in BLUE. To prevent serious damage to the emission control system, you should do the following: Reduce vehicle speed. If the seatbelt warning device for the front passenger's seat does not function correctly (e.g., it is activated even when the front passenger's seat is empty or it is deactivated even when the front passenger has not fastened his/her seatbelt), take the following actions: Ensure that no article is placed on the seat other than a child restraint system and its child occupant, although we strongly recommend that all children sit in the rear seat properly restrained. The icy road surface warning screen should be treated only as a guide. WARNING When the Hill start assist warning light illuminates, have the vehicle inspected at an authorized SUBARU dealer. It remains blinking in RED and BLUE alternately. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability. To make the switch usable again, turn the ignition switch to the "LOCK"/"OFF" position and then turn it to the "ON" position. As a result, the Vehicle Dynamics Control system also becomes inoperative, causing the warning light to illuminate. If the driver's seatbelt is not fastened, a chime will also sound simultaneously. NOTE If the driver's and/or front passenger's seatbelt(s) are/is still not fastened 6 seconds later, the seatbelt warning device
operates as follows according to the vehicle speed: At speeds lower than approximately 9 mph (15 km/h) the warning light(s) for unfastened seatbelt(s) will alternate between steady illumination and flashing at 15-second intervals. When the battery becomes fully charged, the light will turn off. Blind Spot Detection/Rear Cross Traffic Alert (BSD/RCTA) indicator The indicator appears when the BSD/RCTA is suspended temporarily. If this occurs, immediately stop the vehicle at the nearest safe place and check the brake fluid level. Contact your SUBARU dealer immediately for an inspection. NOTE If the driver's and/or front passenger's seatbelt(s) are/is still not fastened 6 seconds later, the seatbelt warning device operates as follows according to the vehicle speed: At speeds lower than approximately 9 mph (15 km/h) the warning light(s) for unfastened seatbelt(s) will alternate between steady illumination and flashing at 15-second intervals. With the ignition switch turned to the "ON" position, this device reminds the driving or does not turn off approximately 3 seconds after turning the ignition switch to the "ON" position, have your vehicle inspected at your SUBARU dealer. This function is effective even if the ignition switch (models without "keyless access with push-button start system"). The light flashes when a malfunction occurs in the Steering Responsive Headlight. If the warning light does not turn off after refilling the engine oil, or the warning light illuminates even though the engine oil level is within the normal range, have the vehicle checked by a SUBARU dealer. Parking brake apply inhibit warning The brake system warning light flashes for 10 seconds and a chirp sound will be heard if the parking brake switch is operated when the parking brake cannot be applied. Do not remove or disassemble the rear seat. NOTE The seatbelt warning system of the rear seat detects if the seat is occupied by a passenger. Instead, have the vehicle towed to the nearest SUBARU dealer for repair. Drive carefully to the nearest SUBARU dealer and have the vehicle inspected immediately. NOTE If the steering wheel is operated in the following ways, the power assist in order to prevent the system components, such as the control computer and drive motor, from overheating: The steering wheel is operated frequently and turned sharply while the vehicle is maneuvered at extremely low speeds, such as while frequently turning the steering wheel during parallel parking. Contact your SUBARU dealer immediately for an inspection: It remains blinking in RED. The electronic parking brake indicator light may flash after the electronic parking brake is frequently applied and released. This warning indicator appears when the SUBARU Rear Vehicle may move. Observer the following precautions: Do not apply any strong impact to the rear seat. Illumination of the warning light while driving. If this indicator remains displayed, have your vehicle inspected by your SUBARU dealer as soon as possible. Financial Programs Guaranteed Trade-in value guarantee for the first eight years of ownership. It is advisable to have the rear differential oil replaced as soon as possible. CAUTION When stopping on a steep slope with the Auto Vehicle Hold function turned on, the electronic parking brake may be automatically applied. When the vehicle has continuously accelerated and decelerated and decelerated by the Auto Start Stop system. When the outside temperature becomes 37°F (3°C) or less, the icy road surface warning screen interrupts to inform the driver that the road surface may be frozen. When the ignition switch is turned ON next time, however, the complete sequence of the warning operation resumes. If the driver's seatbelt is not fastened, a chime will also sound simultaneously. Even if the electronic parking brake indicator light flashes, if the warning light behavior is as described in the following examples, the electronic parking brake system is not a malfunctioning. However, this is not a malfunctioning when you release the electronic parking brake while the engine is running, the electronic parking brake indicator light will turn off. After that, one of the indicators illuminates depending on the status of the front passenger's SRS frontal airbag determined by the SUBARU advanced frontal airbag system monitoring. This indicator illuminates when the Following distance setting switch is pressed and held after pressing the CRUISE switch. This indicator changes from white to green when Conventional Cruise Control is activated. Blind cator changes from white to green when Adaptive Cruise Control or Conventional Cruise Control is activated. Blind cator changes from white to green when Adaptive Cruise Control or Conventional Cruise Control is activated. Blind cator changes from white to green when Adaptive Cruise Control or Conventional Cruise Control is activated. Blind cator changes from white to green when Adaptive Cruise Control or Conventional Cruise Control is activated. Spot Detection/Rear Cross Traffic Alert (BSD/RCTA) warning indicator This warning indicator appears on the combination meter display when the BSD (Blind Spot Detection) or RCTA (Rear Cross Traffic Alert) is not functioning for any reason. Then make sure that the electronic parking brake indicator light is off: Depress the accelerator pedal with the driver's seatbelt fastened and with the doors closed. When driving with an insufficient battery voltage such as when the engine is jump-started, the ABS warning light may illuminated, have the brakes inspected by a SUBARU dealer immediately. All doors are closed. This indicator light illuminates while the vehicle is stopped by the Auto Vehicle Hold function. This coolant temperature low indicator light/coolant temperature low indicator light than the following three functions: Illumination in BLUE indicator light warming up of the engine Blinking in RED indicates that the engine is close to overheating. The TPMS malfunction indicator is combined with the low tire pressure telltale. NOTE The outside temperature indicator shows the temperature in the area around the sensor. If the brake system warning light and ABS warning light and the sensor. If the brake system warning light are the following steps: Stop the vehicle in the nearest safe, flat place. If there is no problem and all tires are properly inflated, the light will turn off. Then the Auto Start Stop OFF indicator light (yellow) This light will turn off. Then the Auto Start Stop OFF switch is pressed to prevent the Auto Start Stop OFF indicator light (yellow) This light will turn off. Then the Auto Start Stop OFF indicator light (yellow) This light will turn off. activated or deactivated. If both warning lights illuminate again and remain illuminated after the engine again, apply the parking brake, and check the brake fluid level. TIPS When the electronic parking brake is automatically applied with the vehicle kept held by the Auto Vehicle Hold function, release the electronic parking brake by either of the following operations before starting off. Ensure that the backward-forward position and seatback of front passenger's seat are locked into place securely by moving the seat back and forth. If still the seatback of front passenger's seat does not function correctly after taking relevant corrective actions described above, immediately contact your SUBARU dealer for an inspection. This indicator light shows the status of the alarm system. NOTE The Driver Monitoring System unit is high. This light illuminates when the Steering Responsive Headlight is turned off. A subscription to the SUBARU STARLINK service has been established.* Solid Red: A system malfunction has occurred. Flashing Green or Red: SUBARU STARLINK service has not been established.* established. * This does not always reflect that the SUBARU STARLINK service is available. In such a case, depress and hold the brake pedal while stopping. This indicator illuminates if the Reverse Automatic Braking System malfunctions. We recommend that you have your vehicle inspected at a SUBARU authorized dealer as soon as possible. When this indicator appears, have your vehicle inspected by your SUBARU dealer as soon as possible. NOTE After replacing or adding the engine oil, if the engine oil, if the engine oil level is within the normal range when restarting the engine oil, if the engine on a level surface, the warning light will turn off. The light illuminates when the Vehicle Dynamics Control OFF switch is pressed briefly to select the traction mode. Do not fold the seatback forward when objects are on the seat. When the Auto Vehicle Hold function is deactivated while the Auto Vehicle Hold function has a malfunction, if you press the Auto Vehicle Hold function is deactivated while the Auto Vehicle Hold function has a malfunction, if you press the Auto Vehicle Hold function has a malfunction is deactivated while the Auto Vehicle Hold function has a malfunction is deactivated while the Auto Vehicle Hold function has a malfunction has a malfunction has a malfunction has a malfunction is deactivated while the Auto Vehicle Hold function has a malfunction has a malfun deactivate the Vehicle Dynamics Control system. The Vehicle Dynamics Control system is probably malfunctioning under any of the following conditions. Control system is probably malfunctioning under any of the following conditions. The Vehicle Dynamics Control system is probably malfunctioning under any of the following conditions. security indicator light remains off in the following conditions. The warning light remains illuminated after the engine has been started, but it turns off when the vehicle speed reaches approximately 25 mph (40 km/h). This light blinks when a malfunction occurs in the pedestrian alert system. When being towed, turn off the Auto Vehicle Hold function It turns off when the parking brake is fully released. Tightening the cap will not make the CHECK
ENGINE warning light turn off immediately. While the vehicle is kept held by the Auto Vehicle Hold function, the Auto Vehicle Hold operation indicator light turn off immediately. While the vehicle is kept held by the Auto Vehicle Hold function, the Auto Vehicle Hold operation indicator light turn off immediately. vehicle. After adjusting the tire pressures, increase the vehicle speed to at least 25 mph (40 km/h) to start the TPMS re-checking of the tire inflation pressures. If both warning lights turn off, the EBD system may be malfunctioning. Have your vehicle inspected at a SUBARU dealer as soon as possible. However, it is not malfunctioning if the indicator light turns off after the electronic parking brake is released. Indicator When you select the manual mode of the driver's control center differential is indicated by the illumination of this indicator. After the light turns off, you can start driving. Vacuum pump system warning (turbo models, except STI) This light illuminates when a malfunction is detected in the vacuum pump system. This indicator illuminates when the Driver Monitoring System is temporarily stopped. When the access key is taken out of the vehicle through an open window, the access key takeout warning or passenger access key takeout warning will not be provided. This indicator changes from white to green. Shut down the engine, apply the parking brake and then restart it. Do not allow the rear seat occupant to place his/her hands or legs on the front passenger's seatback, or allow him/her to pull the seatback. At this time, there will be more resistance when a malfunction occurs in the EyeSight system. When it is illuminated or flashing, none of the EyeSight functions can be used (including Adaptive Cruise Control and Pre-Collision Braking System, etc.). If the light is blinking If the light is blinking while driving, an engine mission control system. Replace the bulb as soon as possible. The ABS warning light illuminates together with the brake system warning light if the EBD system malfunctions. Heavy cargo or large pets on the rear seat may result in the activation of the passenger seatbelt warning light and chime. Immediately take your vehicle to your nearest SUBARU dealer to have the system checked. The warning light alluminates when the ignition switch is turned to the "ON" position, but it does not turn off even when the vehicle speed exceeds approximately 25 mph (40 The warning light illuminates during driving, but it turns off immediately and remains off. Then the Auto Vehicle Hold ON indicator light will turn off. WARNING Driving with the brake system warning light on is dangerous. If the light illuminates while driving, immediately stop the vehicle in a safe place and let the engine idle until the warning light turns off. The keyless access with push-button start system sounds a warning light turns off. The keyless access with push-button start system sounds a warning light turns off. child or small adult is sitting in the seat. If a malfunction occurs in the vehicle (for example, when the rear differential oil temperature warning light illuminates or the AWD warning light blinks), all of the indicators may disappear and the setting value for the initial limited slip differential (LSD) torque of the driver's control center differential (C.DIFF/DCCD) may be cancelled. Your vehicle is equipped with a seatbelt warning device at the driver's and front passenger's seat, as required by current safety standards. When the ignition switch is turned to the "ON" position, both the ON and OFF indicators illuminate for 6 seconds during which time the system is checked. Blinking in RED and BLUE alternately: The electrical system may be malfunctioning. If the warning light flashes, promptly park in a safe location as soon as possible and contact your SUBARU dealer. Otherwise, the Auto Vehicle Hold may not operate. This indicator illuminates when the Reverse Automatic Braking System is turned OFF, or when the Reverse Automatic Braking System is suspended temporarily. If the AWD warning light starts to flash, promptly park in a safe place and check whether the tires have differing diameters and whether any of the tires has an excessively low inflation pressure. If this light illuminates when the engine is running, it may indicate that the transmission fluid temperature is too hot. This light illuminates while the X-mode is activated. The control modes can be selected with the "VSC SPORT" switch. This light illuminates when vehicle speed has been set to use the cruise control function. If the tire pressure sare now above the severe low-pressure threshold, the low tire pressure warning light should turn off a few minutes later. Normal mode allows secure and smooth normal driving. This indicator illuminates when the Driver Monitoring System is activated. The indicator light turns off when the electronic parking brake is released. (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.) As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly underinflated. The light will turn off when the vehicle starts driving. While driving, this indicator appears and informs the driver about the upshift timing for fuel-efficient driving. Then slowly pull off the road to a safe place. The front passenger's seat. However, it does not indicate a malfunction of the C.DIFF/DCCD itself. This indicator light to a safe place on the front passenger's seat. illuminates when the Auto Vehicle Hold is activated. This indicator shows the current SI-DRIVE mode. To turn on: Press the Auto Vehicle Hold oN indicator light is off. ABS warning light CAUTION If any of the following conditions occur, we recommend that you have the ABS system repaired at the first available opportunity by your SUBARU dealer: The warning light does not illuminate when the ignition switch is turned to the "ON" position. This light flashes if the electronic parking brake indicator light flashes, the electronic parking brake system may be malfunctioning. This light illuminates when the cruise control function. The electronic parking brake system is malfunctioning. Contact your nearest SUBARU dealer for service immediately. These lights show the operation of the turn signal or lane change signal. If the indicator lights do not blink or blink rapidly, the turn signal bulb may be burned out. At speeds higher than approximately 9 mph (15 km/h) the warning light(s) for unfastened seatbelt(s) will alternate between flashing and steady illumination at 15-second intervals and the chime will sound while the warning light(s) is/are flashing. Do not store a heavy load in the seatback pocket. The chime will make a peep sound for 15 seconds, and it then will become louder and continue for 35 seconds. For further details of the EBD system malfunction warning, refer to "Electronic Brake Force Distribution (EBD) system warning." NOTE If the warning light behavior is as described in the following conditions, the ABS system may be considered normal: The warning light illuminates when the ignition switch is turned to the "ON" position, the low tire pressure warning light the having light behavior is as described in the following conditions, the ABS system may be considered normal: The warning light illuminates when the ignition switch is turned to the "ON" position, the low tire pressure warning light illuminates when the ignition switch is turned to the "ON" position and turns off approximately 2 seconds after the engine has started. light will illuminate for approximately 2 seconds to check that the tire pressure monitoring system (TPMS) is function will automatically keep the vehicle held even after releasing the brake pedal when the vehicle is at a complete stop, such as at traffic signals. If the brake fluid doors, the rear gate (Outback) or the trunk lid (Legacy) is not fully closed, the door open indicator appears. This indicator appears are fluid level warning Timer has been scheduled. Brake fluid level warning Timer has been s even after the system check period, the system is malfunctioning. Driving on a significantly underinflated tire causes the tire to overheat and can lead to tire failure. Do not use front seats with their backward-forward position and seatback not being locked into place securely. In this case, to ensure safety, the engine will not be automatically restarted, even if you release the brake pedal. If the light does not turn off, take your vehicle to your authorized SUBARU dealer immediately. Transmission control system is not working properly. If you press and hold CAUTION If the Hybrid READY Indicator Light does not illuminate when the engine has been started, have your vehicle checked at a SUBARU dealer. This indicator light illuminates when the ignition switch is turned to the ON position, and then have the system inspected. If any of them are not locked securely, adjust them again. If the seatbelt warning device for the front passenger's seat is empty or it is deactivated even when the front passenger has not fastened his/her seatbelt), take the following actions: Ensure that no article is placed on the seat other than a child restraint system and its child occupant, although we strongly recommend that all children sit in the rear seat properly restrained. If the front passenger's SRS frontal airbag is deactivated, the passenger's srontal airbag on the seat other than a child restraint system and its child occupant, although we strongly recommend that all children sit in the rear seat properly restrained. If the front passenger's SRS frontal airbag is deactivated, the passenger's strongly recommend that all children sit in the rear seat properly restrained.
illuminate. The warning light may illuminate temporarily in the following conditions because a low oil level may be detected as a result of significant oil movement in the engine. For a system check, this indicator light/warning light illuminates in RED for approximately 2 seconds when the ignition switch is turned to the "ON" position. Be sure to check the condition of the road surface before driving. This indicator illuminates while the hill descent control function is in standby. Your vehicle is equipped with a seatbelt warning device at the driver's and front passenger's seat, as required by current safety standards. With the ignition switch turned to the "ON" position, this device reminds the driver and front passenger to fasten their seatbelts by illuminating the warning lights in the locations indicated in the following illustration and sounding a chime. Operation If the driver and/or front passenger have/has not yet fastened the seatbelt(s) when the ignition switch is turned to the "ON" position, the seatbelt warning light(s) will flash for 6 seconds, to warn that the seatbelt(s) when the ignition switch is turned to the "ON" position, the seatbelt warning light(s) will flash for 6 seconds, to warn that the seatbelt(s) is/are unfastened. This indicator light also illuminates when the headlight flasher is operated. Have the vehicle towed to the nearest SUBARU dealer for repair. Unless checked and properly repaired, the seatbelt pretensioners and/or SRS airbag will not operate properly in the event of a collision, which may increase the risk of injury: Flashing or flickering of the warning light. Therefore, the temperature indication may differ from the actual outside air temperature. When Adaptive Cruise Control is activated or when the stay-stopped function is engaged, this indicator illuminates when a vehicle in front has been detected. Apply the electronic parking brake. While driving, if this indicator illuminated in RED: Safely stop the vehicle as soon as possible, and refer to the emergency steps to take in the case of engine overheating. This warning light illuminates when the temperature of the inverter with converter assembly is high. Accordingly, if the ABS is inoperative, the Vehicle stability control (VSC) and TRAC are adjusted to afford maneuverability closer to what a driver may have imagined, while a sense of security is retained. Vehicle stability control (VSC) off indicator come on when in Vehicle stability control (VSC) SPORT mode However, this is not a malfunction. Packed with Technology EyeSight® Driver Assist Technology EyeSight® Driver EyeSight® Driv seconds after the ignition switch is turned from the "ON" position to the "ACC" or "LOCK" position. Even if the security indicator light flashes irregularly or its fuse blows (the light does not flash if its fuse is blown), the immobilizer system will function normally. Contact your SUBARU dealer as soon as possible. NOTE When the electronic parking brake system has a malfunction while the Auto Vehicle Hold function is turned on, a chirp will sound, the Auto Vehicle Hold ON indicator light will turn off and further Release the parking brake. This indicator illuminates in gray when Lane Departure Prevention Function is turned on. It illuminates in white under the following conditions: Lane Departure Prevention Function goes into standby status Land Centering Function is operating by detecting the lane markings It illuminates in yellow when Lane Departure Prevention Function goes into standby status Land Centering Function is operating by detecting the lane markings It illuminates in yellow when Lane Departure Prevention Function goes into standby status Land Centering Function is operating by detecting the lane markings It illuminates in yellow when Lane Departure Prevention Function goes into standby status Land Centering Function goes into standby status for the function goes in Prevention Function is operating. Press the electronic parking brake switch with the brake pedal depressed. CAUTION When the power steering warning light is illuminated, there may be more resistance when the steering warning light is illuminated, there may be more resistance when the steering warning light is illuminated, there may be more resistance when the steering warning light is illuminated. switch is pressed to deactivate the Auto Vehicle Hold function while the vehicle is stopped by the Auto Vehicle Hold function. When driving approximately between 4 mph (6 km/h) and 13 mph (20 km/h), if the seatbelts are not fastened for 50 seconds, the seatbelts warning lights will blink, and a warning chime will sound. This BLUE illuminated light turns off when the engine is warmed up sufficiently. When the electronic parking brake switch is pulled to apply the electronic parking brake indicator light illuminates, remains illuminated for approximately 30 seconds and then turns off. In such a case, depress and hold the brake pedal. CAUTION After turning the ignition switch to the "ON" position, if this indicator light/warning light behaves in any of the following ways, the electrical system may be malfunctioning. This light shows that the headlights are in the high beam mode. Make sure nothing is interfering with the sealing of the cap. WARNING Do not use the Auto Vehicle Hold function on a steep hill or slippery road. This warning illuminates if the Driver Monitoring System malfunction is malfunction is malfunction ing. It will turn off when the engine is restarted. The driver's seatbelt is unfastened. However, when the ignition switch is turned to the "ON" position after it is turned to the "OFF" position, the warning system settings will be restored. WARNING Never drive the engine. However, if the power steering is operated in a nonstandard way, which causes power assist limitation to occur too frequently, that may result in a malfunction of the power steering control system. The driver's seatbelt is fastened. This indicator illuminates when Lane Centering switch (only when Adaptive Cruise Control is on). The indicator turns off when Adaptive Cruise Control is off. While Lane Centering Function is operating, the indicator changes from white to green. This is due to the low battery voltage and does not indicate a malfunction. NOTE If the engine is restarted after a certain driving condition, this indicator changes from white to green. This is due to the low battery voltage and does not indicate a malfunction is operating, the indicator changes from white to green. This is due to the low battery voltage and does not indicate a malfunction is operating. unloading. Do not use the Auto Vehicle Hold function to park the vehicle. The CHECK ENGINE warning light may stop blinking and illuminate steadily after several driving trips. The tire pressure should be checked periodically (at least monthly) using a tire gauge. When this warning indicator appears, have your vehicle inspected by your SUBARU dealer. The warning light illuminates if any door or the rear gate is not fully closed. In such a case, depress and hold the brake pedal while held. Below is a description of the different statuses that the LED light(s) can indicate. Solid Green: System is normal. Engine misfires as a result of an empty tank could cause damage to the engine. Use of the temporary spare tire should therefore be restricted to the minimum time necessary. This indicator light also flashes when the access key warning for engine start may be provided depending on the status of the access key and the environmental conditions. If the belt is loose, broken or if the belt is in good condition but the light remains illuminated, contact your nearest SUBARU dealer immediately. Otherwise, the vehicle may move unexpectedly, causing serious injury or accidents: When washing your vehicle in an automatic car wash. The select lever is in a position other ' position. (Vehicles with an automatic transmission) Use snow mode for accelerating and driving on slippery road surfaces such as snow. This indicates the status that the steering wheel is not released and could result in an accident involving serious injury or death. Frequent operation warning The electronic parking brake indicator light flashes for 10 seconds and a chirp sound will be heard if the parking brake switch is operated too frequently. The warning light will turn off and the warning lights will continue to illuminate until their seatbelt is fastened. The seatbelt warning light can be cancelled. The indicator illuminates when a malfunction occurs in the hybrid system. This indicator light illuminates when the One-touch Interior Illuminates when the tank is nearly empty, at approximately 2.6 US gal (10.0 liters, 2.2 Imp gal). All warning messages should be strictly observed: On a steep slope, the vehicle cannot be kept held by the Auto Vehicle Hold function. Always make sure this indicator does not appear before you start to drive. If liquid is spilled, wipe it off immediately. Have your vehicle Hold function when stopping on an incline. In such cases, the Auto Vehicle Hold operation indicator light will turn off and the electronic parking brake indicator light will illuminate. Have the vehicle inspected by your SUBARU dealer. Observe the following precautions. When the brake pedal is depressed of the brake control function is activated, the brake lights on the vehicle indicator illuminate red When the AUTO [+] mode is set, the AUTO [+] mode is set, the AUTO [+] indicator appears. Have your vehicle Hold function is released, the Auto Vehicle Hold function is released, the Auto Vehicle Hold operation indicator light will turn off. CAUTION The tire pressure monitoring system is NOT a substitute for manually checking tire pressure. When the operation indicator light/warning light blinks in RED or illuminates in RED, safely stop the vehicle as soon as possible, and refer to the emergency steps to take in the case of engine overheating. Do no spill liquid on
the rear seat. The overhead console includes the LED status lights that indicator disappears when the system is activated. Also, the light flashes when a malfunction occurs in the Steering Responsive Headlight. Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale. Ensure that the backward-forward position and seatback of the front passenger's seat are locked into place securely by moving the seat back and forth. NOTE When the electronic parking brake applied, the electronic parking brake applied, the electronic parking brake indicator light remains illuminated for approximately 30 seconds and then turns off. This does not indicate the existence of a problem. Immediately stop your vehicle in a safe location, use tire stops under the tires to prevent the vehicle from moving and contact your SUBARU dealer. NOTE Wait until the indicator light turns off. While the vehicle from moving and contact your substance from moving and contact your sub the system checked by your nearest SUBARU dealer. NOTE This light also illuminates when the fuel filler cap is not tightened until it clicks. If this light should illuminate while driving (with the parking brake fully released and with the ignition switch positioned in "ON"), it could be an indication of leaking of brake system warning The brake system warning light flashes when the electronic parking brake system warning light flashes when the electronic parking brake system warning light flashes when the electronic parking brake system warning light flashes when the electronic parking brake system is malfunctioning. To operate the Auto Vehicle Hold function Stop the vehicle by depressing the brake pedal when all of the following conditions are met. For details about the warning cancellation, contact a SUBARU dealer. This indicator light illuminates when the engine speed reaches the level that was previously set. If there is no passenger on the front p front passenger's frontal airbag ON and OFF indicators show you the status of the front passenger's SRS frontal airbag. If the light illuminates while driving or does not turn off after the engine at the first safe opportunity and check the engine oil level. This indicator illuminates and shows which position the select lever or the gear is in. If the engine coolant temperature increases over the specified range, the indicator light/warning light blinks in RED. Items caught between the seat bottom and seatback, when folded, may damage the seat surface or activate the passenger seatbelt warning light and chime. Operation If passengers in the rear seats do not fasten their seatbelts while the ignition switch is turned to the "ON" position, the seatbelt warning lights will illuminate or blink to indicate that their seatbelt warning system operates as follows according to the vehicle speed: The warning light will not fastened while driving, the seatbelt warning system operates as follows according to the vehicle speed: The warning light will not fastened while driving, the seatbelt warning system operates as follows according to the vehicle speed: The warning light will not fastened while driving, the seatbelt warning light will not fastened while driving. illuminate when driving approximately 4 mph (6 km/h) or less. The function will be canceled by either of the following operations. The warning light illuminates while the vehicle Dynamics Control system may be considered normal: The warning light in the following examples, the Vehicle Dynamics Control system may be considered normal: The warning light in the following operations. illuminates when the ignition switch is turned to the "ON" position and turns off approximately 2 seconds after the engine has started. If the brake fluid level is below the "MIN" mark, DO NOT drive the vehicle. Contact a SUBARU dealer for an inspection. If the indicator light flashes, promptly park in a safe location as soon as possible and contact your SUBARU dealer. If you have recently refueled your vehicle, the cause of the CHECK ENGINE warning light/malfunction indicator light illuminates under the following conditions: When the light switch is turned to either position When the light control switch is in the "AUTO" position and the headlights illuminate automatically. WARNING If the warning light exhibits any of the following conditions, there may be a malfunction in the seatbelt pretensioners and/or SRS airbag system. Avoid steep uphill grades. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Make sure to shift the select lever to the "P" position and apply the electronic parking brake in the following cases: When you are going to park your vehicle. This warning indicator appears when the high beam assist function malfunctions. Under certain conditions, including a malfunction of the Auto warning buzzer will sound and a warning buzzer will sound and a warning light and ABS warning light illuminate simultaneously during driving. CAUTION If the R.DIFF TEMP warning light illuminates, reduce vehicle speed and stop the vehicle in a safe location as soon as possible. NOTE If the temporary spare tire is used, the AWD warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash. If the engine low oil level warning light may flash warning light may flash. If the engine low oil level warning light may flash warning light may flash. If the engine low oil level warning light may flash warning light may flash warning light may flash. If the engine low oil level warning light may flash wa parking brake cannot be released even if the parking brake switch is pushed. If the light illuminates while driving or does not turn off after the engine at the first safe opportunity and check the alternator belt. NOTE Wait until the warning light turns off. The warning light illuminates right after the engine is started but turns off. immediately, remaining off. Deactivate the Auto Vehicle Hold function in the following cases. If the engine coolant temperature increases further, the indicator light/warning light illuminates in RED continuously. Continuously. location. You will be safe while driving with this condition, but drive carefully and have your vehicle checked at a SUBARU dealer as soon as possible. NOTE If the electrical circuit of the Vehicle Dynamics Control system itself malfunctions, the warning light only illuminates. The light should turn off as soon as the engine has warmed up. The indicator light illuminates when the engine has developed a problem and the CHECK ENGINE warning light/malfunction indicator light is on. The Vehicle Dynamics Control system is probably malfunctioning under the following condition. Have your vehicle checked at a SUBARU dealer immediately: The light does not illuminate when the ignition switch is turned to the "ON" position. This light will illuminate when "Auto Start Stop" is touched to prevent the Auto Start Stop system from operating. With the ignition switch turned to the "ON" position, the seatbelt warning lights. WARNING The driver must check that the all passengers have fastened their seatbelts properly since the seat- belt warning system may not detect passengers under the following circumstances: When cushions or child restraint systems, etc., are used. Approximately 7 seconds after the engine starts, the Lane Departure Warning OFF indicator light will turn off or remain illuminated depending on the current status (ON or OFF). When the warning light is on (and the brake system warning light is off), the ABS function shuts down. NOTE This light does not turn off unless the tank is replenished up to an internal fuel quantity of approximately 4.5 US gal (17 liters, 3.7 Imp gal). CAUTION When starting the engineering the engine light does not turn off, contact the nearest SUBARU dealer for service. NOTE If the tire pressures are not all the same size and brand, the rear differential will be heavily loaded when the vehicle is driven, resulting in an abnormally high oil temperature. The rear differential oil will deteriorate if its temperature increases enough for the rear differential oil temperature warning light to illuminate. In this case, the operation of the dashboard. However, if the light still illuminates, stop the vehicle in a safe indicates operation of the immobilizer system. It blinks to show the driver the operational status of the alarm system. Immobilizer system. Immobilizer system. Immobilizer system. Immobilizer system. Immobilizer system. Immobilizer system. to the "OFF" position. Immediately after the driver's door is opened or closed when all of the following conditions are met: The push-button ignition switch is in the "ON" or "ACC" position. It is possible to cancel the warning operation that follows the 6-second warning after turning ON the ignition switch. Though both the Vehicle Dynamics Control and ABS systems are inoperative in this case, the ordinary functions of the brake system are still available. If you have a flat tire, replace it with a spare tire as soon as possible. When a spare tire is mounted or a wheel rim is replaced without the original pressure sensor/transmitter being transferred, the Low tire pressure warning light will illuminate
steadily after blinking for approximately one minute. The READY indicator illuminates when Adaptive Cruise Control and Conventional Cruise Control through the electrical circuit of the ABS system. CAUTION If the CHECK ENGINE light illuminates while you are driving, have your vehicle checked/repaired by your SUBARU dealer as soon as possible. If any of them are not locked securely, adjust them again. The vehicle may move unexpectedly, causing serious injury or accidents. This function is effective even if the ignition switch is in the "LOCK"/"OFF" or "ACC" position, or the key is removed from the ignition switch. When driving more than approximately 13 (20 km/h), if the seatbelts are not fastened for 35 seconds, the warning lights of the unfastened seatbelts will blink, and a chime will sound loudly. When the AUTO [-] mode is set, the AUTO [-] indicator appears. Then the electronic parking brake indicator light will flash. When getting out of the vehicle on a flat surface, then apply the electronic parking brake. Continued vehicle operation without having the emission control system checked and repaired as necessary could cause serious damage, which may not be covered by your vehicle's warranty. If this light illuminates steadily or blinks while the engine is running, it may indicate that there is a problem or potential problem somewhere in the emission control system. If this light still illuminates while driving after adjusting the tire pressure, a tire may have significant damage and a fast leak that causes the tire to lose air rapidly. When the vehicle is continuously turned. When using the Auto Vehicle Hold function, do not release the brake pedal before the Auto Vehicle Hold operation indicator illuminates. This sequence will continue upon subsequent vehicle start-ups as long as the malfunction exists. Depressing the brake pedal again. This light illuminates when the high beam assist function is activated. Use normal operation to restart the engine. This indicates the TPMS is unable to monitor all four road wheels. It turns off when approximately 9 seconds have elapsed since the engine started. When it is illuminated, none of the EyeSight function can be used except for Conventional Cruise Control. At speeds higher than approximately 9 mph (15 km/h) the warning light(s) for unfastened seatbelt(s) will alternate between flashing and steady illumination at 15-second intervals and the chime will sound while the warning light(s) is/are flashing. It is possible to cancel the warning operation that follows the 6-second warning
